

STEPS TO INSPECT OUTPUT

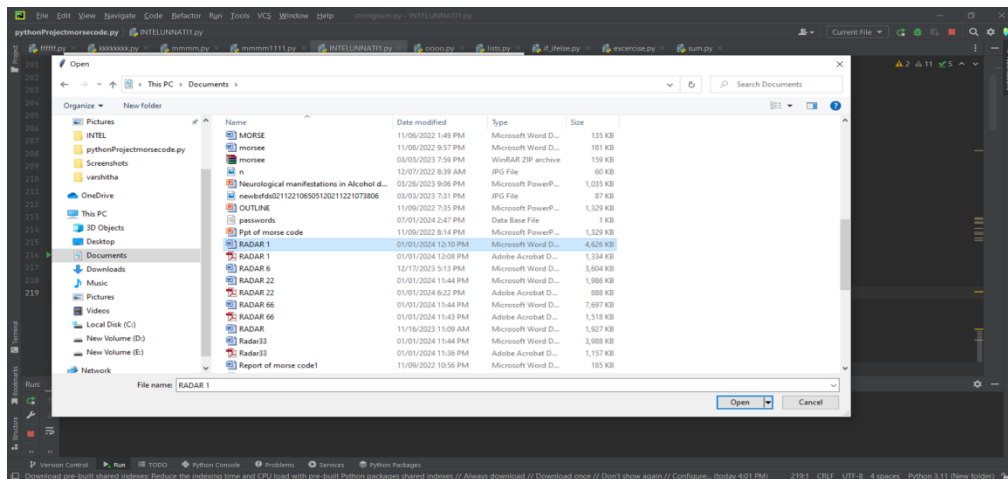

1. Run the program, choose an option(encrypt)

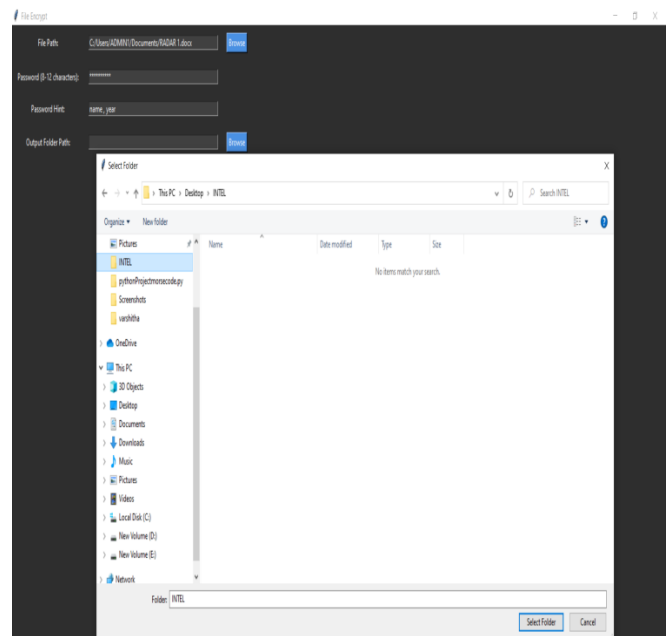

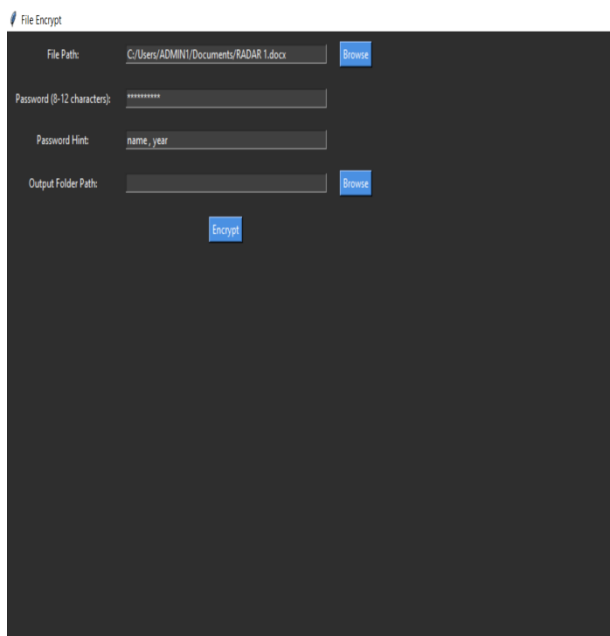

2. A GUI will open asking for file path, Password of length between 8 to 12 characters , Password hint and output folder where the encrypted file to be stored.

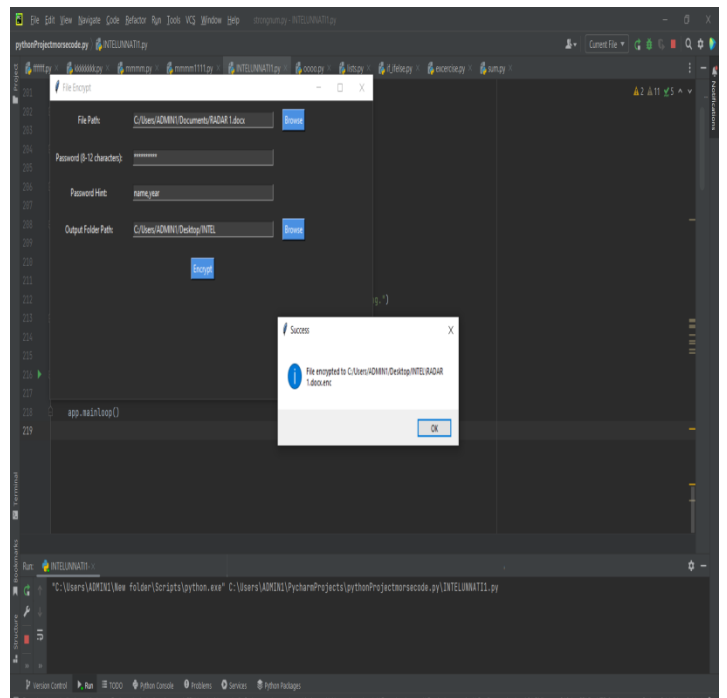

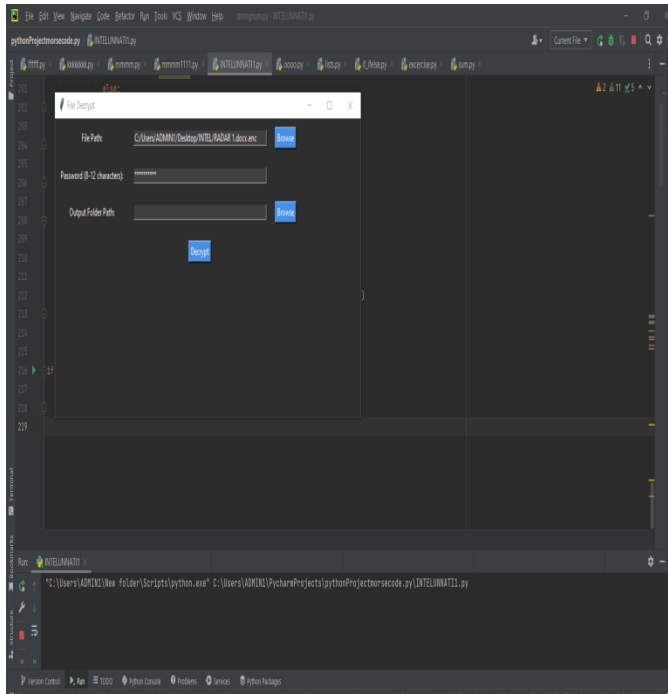

3. Browse the file you want to encrypt from the file manager

4. Fill the remaining details

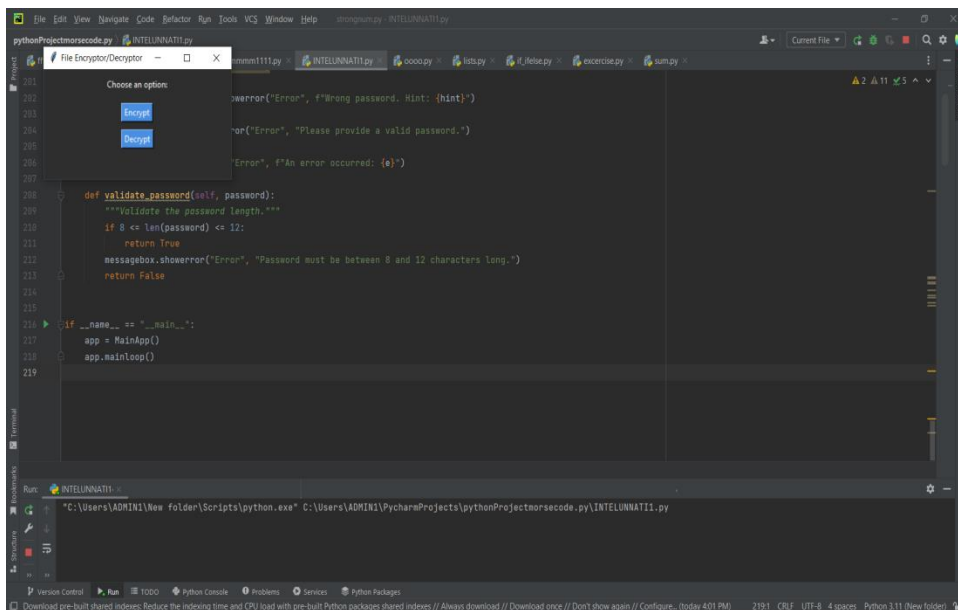

5. Click on encrypt and the file will get encrypted

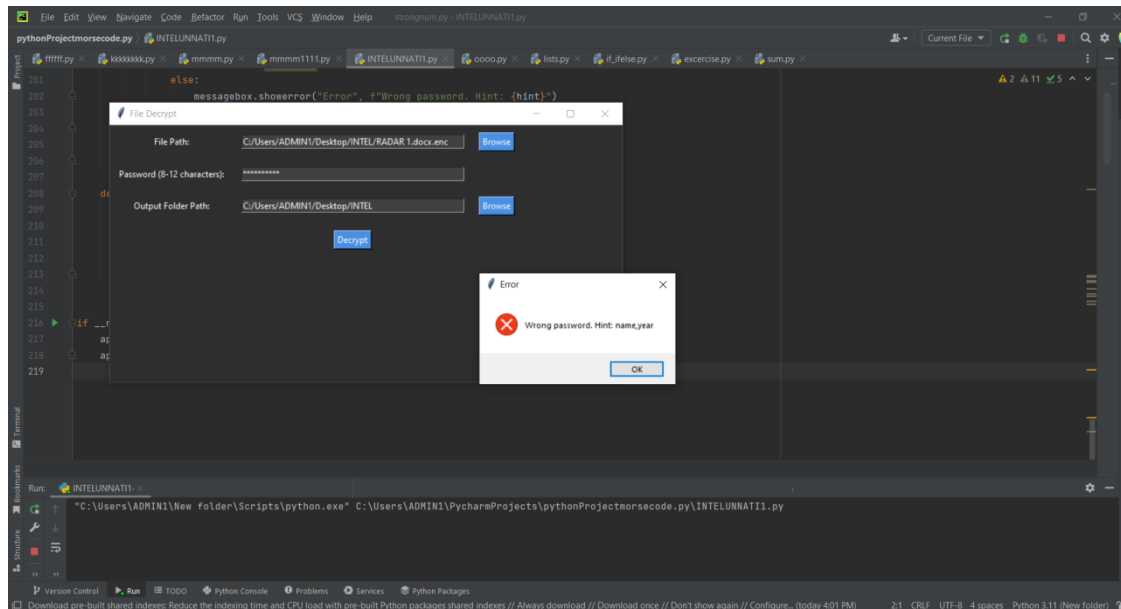

DECRYPTION

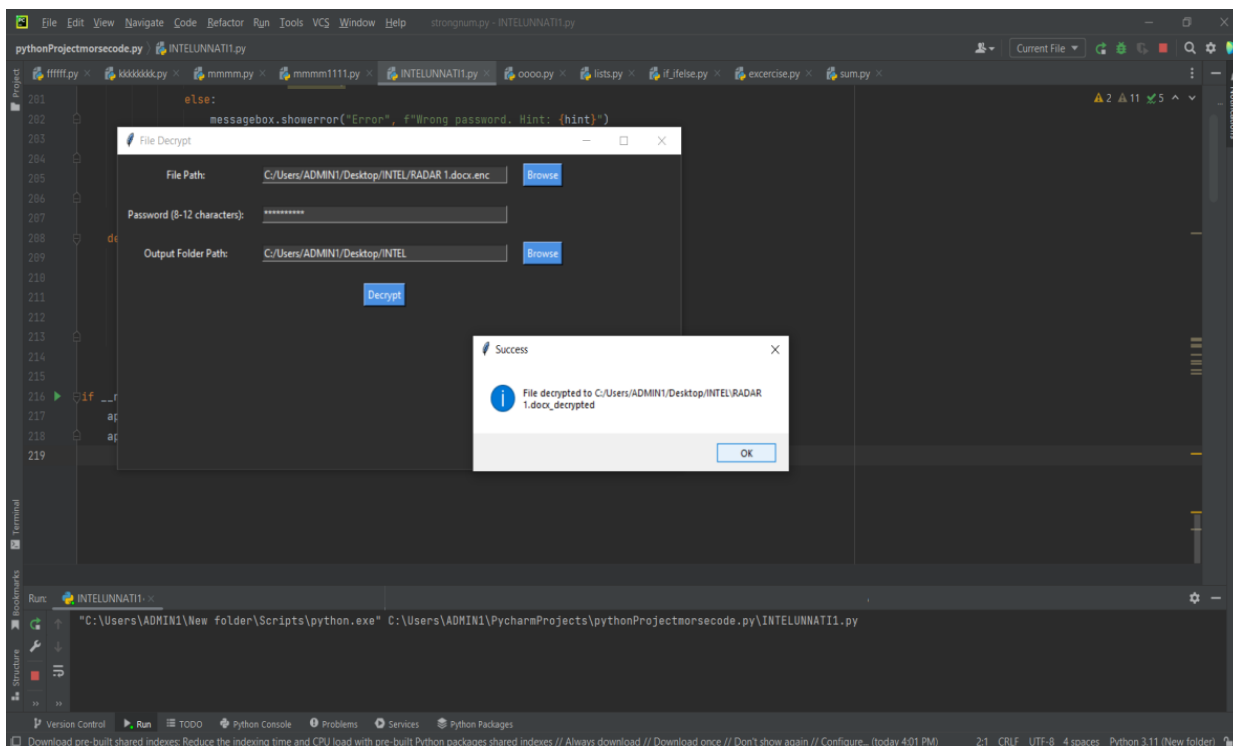

6. Choose an option to decrypt followed by you will be asked to fill the details provided during encryption.

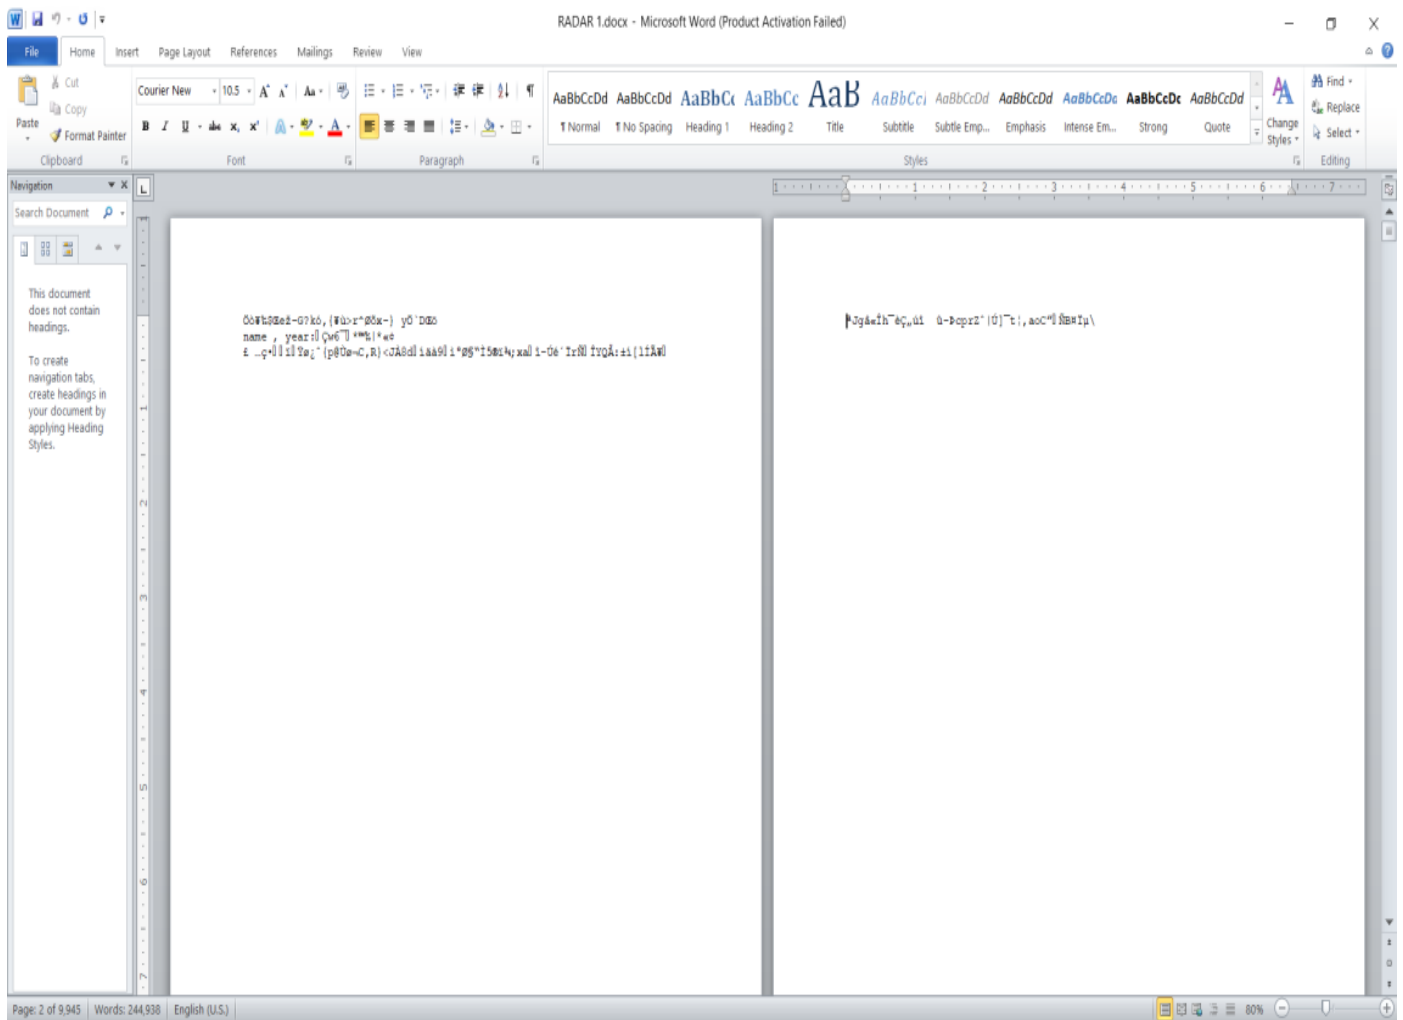

- If you enter the wrong password then a message of invalid password and the hint will be displayed.

- Correct the password and decrypt the file.

9. Open the encrypted filestore as filename.enc from the saved folder(in word).The password is protected and hint is displayed in the usual format.

Öö%\$Æž-G?kó, {¥ù>r^øðx-} yÖ`DÆö
